

NIGHTS & WEEKENDS SMART PLAN

USE ELECTRICITY WISELY TO SAVE

Watching the clock can save you money.

Did you know that your business may be able to save money simply by using electricity at the right time of day? Our optional Nights & Weekends Smart Plan enables you to take advantage of lower electric rates during off-peak hours: late in the evening, overnight and all weekend.

When are Off-Peak hours?

Off-peak hours are 8:00 pm to 8:00 am Monday – Friday; and all day Saturday and Sunday.

Off-peak hours also include all day on New Year’s Day, Memorial Day, Independence Day, Labor Day, Thanksgiving and Christmas.

Nights & Weekends pricing gives your business the opportunity to manage your own energy costs. At right is a comparison of electric rates under the optional Nights & Weekends Smart Plan for Business versus our standard rates.

Nights & Weekends Smart Plan Pricing for Business	
Off-Peak Rate	\$0.08 per kilowatt-hour
On-Peak Rate	\$0.14 per kilowatt-hour
Monthly Customer Charge	\$14.50

Standard Pricing	
Standard Energy Rate	\$0.11 per kilowatt-hour
Monthly Customer Charge	\$14.50

Yes! I would like to enroll in the Nights & Weekends Smart Plan and save money on electricity use during off-peak hours.

Off-peak hours are 8:00 p.m. to 8:00 a.m. Monday-Friday; all day Saturday and Sunday; and all day on New Year’s Day, Memorial Day, Independence Day, Labor Day, Thanksgiving and Christmas.

Participation in the Nights & Weekends Plan is optional and does not involve any enrollment costs. You will be required to remain on the plan for one full year from the date of enrollment. If you wish to return to the standard residential rate option, you may do so without penalty at any time after one year.

Nights & Weekends Smart Plan for Business

How Nights & Weekends rates work

We are able to offer lower electric rates during off-peak hours because our costs as a utility are typically lower at those times. During the daytime when demand for electricity is highest, we usually pay more for power from our power supply resources. The Nights & Weekends Plan rewards your business with a discount for helping to spread the demand for electricity more evenly over each 24-hour period.

Although you'll earn a discount for using electricity during off-peak hours, you will pay a higher rate for the electricity you use during on-peak hours.

Is this an option for you?

On average, customers who use at least 64 percent of their monthly electricity during off-peak hours will save money on the Nights & Weekends Plan. This can be achieved through simple changes such

as setting back your thermostat during the day and running major appliances like your clothes washer or dishwasher during nights and weekend.

The best way to find if our Nights & Weekends Plan makes sense is with the "Check Your Tool" in MyAccount. You can run a quick analysis of your usage history and see if you are a good candidate to switch plans. You can also call us at (608) 837-5500 to find out if it's the best option for your business.

Participation is simple

There is no cost to sign up for the Nights & Weekends Plan. You need to remain on the Nights & Weekends Plan for at least one year so that your savings can be properly assessed. Your monthly electric bill will give you details about your usage during off-peak versus on-peak hours. We will also provide an annual statement that shows you how your costs under the Nights & Weekends Plan compared to what you would have paid using standard rates.

Making the Most of Nights & Weekends

You can take advantage of discounted rates by shifting as much of your electrical use as possible to off-peak periods. The more electricity you use during off-peak hours, the more money you will save. Your best energy savings will come from the following:

- Set back HVAC system temperatures when a space is not occupied. Annual maintenance also ensures the HVAC system is running at it maximum efficiency.
- Turn off all lighting (or install occupancy sensors) when a space is not occupied. Install only energy efficient exit signs.
- Process heating is a large energy user in manufacturing, therefore look for ways to use sparingly during on-peak hours.
- Use large energy devices during non-peak hours, such as fork lifts, engine heaters and electric water heaters.
